LAB TASK 1: WEEKLY CLASS ROUTINE

Topic	HTML and CSS	**Marks**	10 (5% of midterm)
Task time	60 minutes	**Extra time**	15 minutes (GitHub push and file submission)

Scenario

A student wants a page showing their weekly class routine, with a small feedback form for classes. Build the page described below.

Reference screenshot

Important: The screenshot is only an inspiration. Do not try to copy it exactly. Your colors, fonts and text may differ. You are marked on the numbered requirements below, not on how closely your page matches the picture.

Rules

- Write **one HTML file** (for example `routine.html`). All CSS must be **internal** (inside a `<style>` tag in the same file). No external CSS, JS or local image files. For the image, use any image URL from the internet.
- Do not use any framework or library.
- Work in any editor you like. Test the form in your browser.
- You may not use any generative AI to generate code. You are allowed to browse the W3Schools website for reference as well as the slides.

PTO

Requirements (1 mark each)

1	**Page setup.** Valid HTML skeleton with the `<title>` "My Class Routine", one internal `<style>` block, and an `<h1>` with the text "Weekly Class Routine" and `id="page-title"`. Style it using an **ID selector**: centered, dark green, font size 28px.	**1 mark**
2	**Image.** An `<img>` loaded from a URL, with `alt`, `title`, `width` and `height` attributes. It is centered on the page by placing it inside a `<p>` that has a class (for example `center`) styled with `text-align: center`.	**1 mark**
3	**Table basics.** A routine table with header row Day / Time / Course / Room and at least three days of classes. Use CSS (grouped selector `table, th, td`) for a `1px solid` border with collapsed borders, `8px` padding on cells, and a light-green background on `<th>`.	**1 mark**
4	**Table header span.** The first row of the table is a single `<th>` spanning all four columns with the text "Class Schedule - Fall 2026". (Use the colspan attribute)	**1 mark**
5	**Table row span.** Sunday has two classes (Theory at 08:30 AM and Lab at 10:00 AM). The cell "Sunday" must span both rows. (Use the rowspan attribute)	**1 mark**
6	**Table styling.** A table row changes to a khaki background when hovered. The Lab course cell has `class="lab"` styled bold and dark red.	**1 mark**
7	**Form structure.** A `<form>` with an `action` and `method="post"`, wrapped in a `<fieldset>` with the `<legend>` "Class Feedback". Every field has a `<label>` connected with `for` / `id` and every field has a `name`. Using an **attribute selector**, give all `text` inputs a `2px solid green` border. Include Full Name (required, at least 3 characters) and Email (email type, required).	**1 mark**
8	**Date and choice-list fields.** Class Date (date type, required), Course (a text input connected to a `<datalist>` of three courses, required), and Rating (number, required, minimum 1, maximum 5). (Use the datalist element)	**1 mark**
9	**Selection fields.** Class Type (two radio buttons, Theory and Lab, required, same `name`), and Day (a drop-down with a first option "Select a day" that has an empty value, then the available options are: Sunday, Tuesday and Thursday; required).	**1 mark**
10	**Finish the form.** A Comments `<textarea>` (required, at least 10 characters) and a submit button "Send Feedback". The browser must refuse to submit the form while any rule above is violated.	**1 mark**

Submission

1. Create a GitHub repository called “WT-MLT1” (e.g. https://github.com/<your_username>/WT-MLT1). Push your HTML file to that repository using the command line.
2. Submit your HTML file to the AIUB Portal:

   Login to AIUB Portal -> Open the Results page for this section -> Find “Lab Task 1” under midterm grades -> Click the "Upload document" link -> Upload your HTML file on this page.

   If you upload a wrong file by mistake, you can upload again within the deadline. **Only the last submission will be graded.**

Total time: 60 minutes for the task + 15 minutes for the GitHub push and file submission.
